# Preface

The VII Ibero-American Conference on Human-Computer Interaction is an annual event that took place in Brazil for the first time. Previously held in Colombia, Mexico, and Peru, this event is a forum for discussing and learning topics related to Human-Computer Interaction (HCI) in the Ibero-American context.

This year, the leading theme was “HCI and IoT: interaction beyond the computer”. Due to computational advancements, increased capacity, and processing speed, computational devices have become more intelligent and available. Thus, technology becomes more and more present in the different activities of human beings. At the same time that technology brings benefits, it is necessary to discuss its impacts on human beings, how people appropriate the technology in their various activities, and how technology can benefit different users.

The VII Ibero-American Conference on Human-Computer Interaction represents an excellent opportunity for researchers to present their work within an Ibero-American context. It allows the exchange of experiences, the expansion of contact networks in different countries, and the establishment of future research partnerships.

This year, we received 68 papers submitted for peer review; out of these, 16 were accepted for this volume, 11 as regular papers, and 5 as short papers.

We thank the Program Committee members, the authors, and the organizers for their work and contribution. We hope to have them again in future editions.

September 2021

The editors.
