

Preface

The 4th International Workshop on Spatio-Temporal Reasoning and Learning (STRL 2025) was organised as part of the 34th International Joint Conference on Artificial Intelligence (IJCAI 2025), the premier AI Research conference bringing together the international AI community to communicate the advances and achievements of AI research. IJCAI 2025 was held in Montreal, Canada, and the STRL 2025 workshop was held there as a full-day event.

Context

Opposing the false dilemma of logical reasoning vs machine learning, we argue for a synergy between these two paradigms in order to obtain hybrid AI systems that will be robust, generalizable, and transferable. Indeed, it is well-known that machine learning only includes statistical information and, therefore, is not *inherently* able to capture perturbations (interventions or changes in the environment), or perform reasoning and planning. Ideally, (the training of) machine learning models should be tied to assumptions that align with physics and human cognition to allow for these models to be re-used and re-purposed in novel scenarios. On the other hand, it is also the case that logic in itself can be brittle too, and logic further assumes that the symbols with which it can reason are already given. It is becoming ever more evident in the literature that modular AI architectures should be prioritized, where the involved knowledge about the world and the reality that we are operating in is decomposed into independent and recomposable pieces, as such an approach should only increase the chances that these systems behave in a causally sound manner.

The aim of this workshop is to formalize such a synergy between logical reasoning and machine learning that will be grounded on spatial and temporal knowledge. We argue that the calculi associated with the spatial and temporal reasoning community, be it qualitative or quantitative, naturally build upon physics and human cognition, and could therefore form a module that would be beneficial towards causal representation learning. A (symbolic) spatio-temporal knowledge base could provide a dependable causal seed upon which machine learning models could generalize, and exploring this direction from various perspectives is the main theme here.

Organizing Committee Members

- Prof. **Parisa Kordjamshidi**, Michigan State University, US
- Dr. **Jae Hee Lee**, University of Hamburg, Germany

- Prof. **Mehul Bhatt**, Örebro University, Sweden
- Prof. **Michael Sioutis**, LIRMM UMR 5506, University of Montpellier & CNRS, France (primary contact)
- Prof. **Xun Gong**, Southwest Jiaotong University, Chengdu, China
- Prof. **Zhiguo Long**, Southwest Jiaotong University, Chengdu, China

Program Committee Members

- Esra Erdem, Sabancı University, Istanbul, Turkey
- Fangjun Li, University of Manchester, UK
- Kathleen Stewart, University of Maryland, US
- Margot Geerts, KU Leuven, Belgium
- Parisa Kordjamshidi, Michigan State University, US (co-chair)
- Sook-Ling Chua, Multimedia University, Cyberjaya, Malaysia
- Billy Peralta, Andrés Bello National University, Chile
- Irtaza Khalid, Cardiff University, Wales
- Jae Hee Lee, University of Hamburg, Germany (co-chair)
- Jie Feng, Tsinghua University, Beijing, China
- Mehul Bhatt, Örebro University, Sweden (co-chair)
- Michael Sioutis, University of Montpellier, France (co-chair)
- Nassim Belmecheri, Simula Research Laboratory, Oslo, Norway
- Anthony (Tony) G Cohn, University of Leeds, UK
- Weiming Huang, University of Leeds, UK
- Xun Gong, Southwest Jiaotong University, Chengdu, China (co-chair)
- Zhiguo Long, Southwest Jiaotong University, Chengdu, China (co-chair)

Acknowledgements

With respect to organising and attending the 4th International Workshop on Spatio-Temporal Reasoning and Learning, Michael Sioutis would like to acknowledge partial funding by the Agence Nationale de la Recherche (ANR) for the “Hybrid AI” project that is tied to his Junior Professorship Chair, and the I-SITE program of excellence of the University of Montpellier that complements the ANR funding.
